Bittium Tough Mobile

Designed and built for users like government agencies, authorities and first responders.

Bittium Tough Mobile highlights:

- **Global connectivity** with 9 LTE bands, including commercial bands and LTE band 14 for public safety
- **Enhanced security** with dedicated security hardware not previously seen in smartphones, secure boot with custom keys and integrity check, runtime integrity check, tamper detection and reporting, stealth mode, etc.
- **Extremely durable** mechanical construction due to cast magnesium unibody
- **IP67** level water and dust protection, **MIL-STD-810G** level shock resistance
- **Glove-friendly** touch screen, functional also in wet conditions
- **Loud and clear audio** with high-performance speakers and multi-microphone active noise cancellation
- **Programmable Push-to-Talk** (PTT) button enables mission-critical voice applications
Bittium Secure Suite

Bittium Secure Suite is a device and server side software solution that enables the unique Tough Mobile features through a set of scalable services, designed from the ground up to earn your trust.

- **SafeMove Mobile VPN** – Secure your network traffic
- **Secure push service** – Allow your apps to reach your devices without the risks of public clouds
- **Remote attestation** – Ensure the integrity of your devices before granting access to mission critical services
- **Secure App Store** – make available precisely the apps your workforce needs
- **Device Management** – Maintain full control over your device fleet
- **Log server** – Collect an undeniable audit trail from your devices and server components
- **OTA firmware update** – maintain an up-to-date device fleet on your own terms
